PROJECTS

One page layout | *HTML, SCSS, BEM, JS,*

[Github](#)

- DOM Manipulation
- Using JavaScript, inserted product cards in the categories “All Products”, “Clothes”, “Accessories”.
- On clicking on the product card, a modal window was opened, with the card data on which there was a click.

Two pages layout | *HTML, SCSS, BEM, Vue.js*

[Github](#)

- Divided App.vue into components and did the relationship between them
- Made up the second page “How to get points” in the layout. Added it to routes
- And used the transition to the page above by clicking on the “hot button” - “How to get points”
- Received data from backend and transferred to vuex actions
- The value of the user’s points changes when click on “Order” in the modal window at the cost of the selected product
